

Economical

The SightLogix intelligent SightSensor provides the highest reliability and greatest range (1500') at the lowest overall cost of any automated outdoor surveillance system on the market.

1/3 Cameras
0 Servers
10x Area

<50% Cost

The SightLogix high-performance, long-range SightSensors greatly reduce the number of cameras required to secure an outdoor perimeter.

This results in up to 2/3 fewer cameras, 2/3 less infrastructure, and a more efficient use of security personnel, at a cost less than half that of alternative systems.

By eliminating up to 2/3 of the infrastructure and installation costs, security professionals can cover much larger areas of their perimeters without increasing their security budget.

Operation & Maintenance (O&M) budgets will also be reduced proportionally through the reduction of infrastructure. Additional savings are realized by reducing the total number of channels needed to display, manage, and store video data.

Unlike solutions that process some or all of the video at the server, the SightLogix complete edge device requires zero server-based processing. This eliminates the need for costly server farms and makes the cost of scaling the SightLogix solution truly linear.
